## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because the reference characters of Figures 1-9 are not legible. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
2. This application is in condition for allowance except for the following formal matters:

The replacement sheets filed on 8/24/2005 are not different than the previous drawing sheets. The reference characters of Figures 1-9 are not legible.

Art Unit: 2819

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

***Allowable Subject Matter***

3. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not teach a decoding system that comprises a controller that applies a portion of a code data having a code length of bits to an analog decoder core, the analog decoder having an input length that is less than the code length.
